PROFESSIONAL SUMMARY

Data enthusiast proficient in SQL, Excel, and Power BI with a strong foundation in Accounting and Finance. Experienced in cleaning, exploring, and visualizing data to drive actionable insights. Skilled in creating interactive dashboards and performing statistical analysis. Open to internships or entry-level roles to leverage analytical skills and add value to business operations.

TECHNICAL SKILLS

Data Analysis Tools: SQL, Microsoft Excel, Power BI, Python

SQL Skills: Joins, Aggregations, Subqueries, Window Functions, Data Normalization

Power BI Skills: DAX, Power Query, KPI Dashboards, Data Modeling, Interactive Reports

Python Libraries: Pandas, NumPy, Matplotlib, Seaborn

Cloud Platforms: Basic Knowledge of AWS, Microsoft Azure

Core Competencies: Data Cleaning, Data Transformation, Statistical Analysis, Exploratory Data Analysis, Data Visualization, Dashboard Design, Business Intelligence

Languages: English, Kannada, Hindi

PROJECTS

Restaurant Data Analysis | SQL, Excel, Power BI

2025

- Performed exploratory data analysis on restaurant dataset using SQL and Excel; identified that only 26% of restaurants offer online delivery, surfacing a key business opportunity to expand digital reach and improve customer ratings.
- Analyzed market pricing structure using SQL aggregations; found that nearly 47% of restaurants operate in the lowest price range, revealing a highly competitive and budget-focused market segment.
- Built a Power BI dashboard to visualize cuisine distribution and market competition; identified North Indian cuisine as the market leader, enabling data-driven decisions on diversification and competitive strategy.

Customer Shopping Behavior Analysis | SQL, Excel, Power BI

2025

- Conducted customer segmentation analysis using SQL and Power BI DAX; identified high-value segments in the 46-60 age group, estimated to improve targeted marketing ROI by 5-8%.
- Analyzed discount usage patterns with SQL queries; detected inefficient discount allocation with potential to improve profit margins by 3-6% by eliminating non-value-adding promotions.
- Designed interactive Power BI dashboard with KPIs and slicers; revealed Clothing as the top revenue-generating category, suggesting 4-7% revenue growth through strategic inventory and marketing focus.

Sleep and Lifestyle Health Analytics | SQL, Excel, Power BI

2025

- Cleaned and transformed raw health data using Excel and SQL, including blood pressure splitting, age and stress category creation, and value standardization across 374 individual records.
- Wrote SQL queries to analyze sleep duration, stress levels, heart rate, blood pressure categories, and physical activity by demographic and health factors; insights estimated to support 5-9% improvement in sleep quality.
- Developed a Power BI dashboard with KPI cards, distribution charts, and scatter analysis to highlight health risk patterns; findings suggest 3-6% reduction in health-related productivity loss through preventive interventions.
